

Parts and Services

Solutions. Performance. Relationships.

Buell APC, a division of MET offers a portfolio of parts and services from all OEM ESP and fabric filter designs in addition to custom designed medium pressure fabric filter, ESP, and ESP to fabric filter conversion technologies.

Replacement Parts and Repairs

MET Buell APC offers programmed preventive maintenance as well as complete overhaul, repair, and parts service for ESPs of any manufacture or vintage. Overhauls and repairs can be provided on a material only basis or turnkey. Our parts department is geared for fast turnaround of off-the-shelf and engineered parts.

Field Services

MET Buell APC understands the importance of maintaining efficient ESP and fabric filter performance. Our commitment to quality is an integral part of our focus on customer service. Our service technicians and engineers are extremely knowledgeable and have decades of experience in precipitator and fabric filter equipment. Our goal is to minimize downtime and facilitate the most cost effective and beneficial solutions to our customers. Field services include:

- ESP and fabric filter inspections and detailed inspection reports prepared with recommendations and graphic representations of casing and component integrity
- ESP voltage controller diagnostic evaluation
- ESP and fabric filter troubleshooting of performance problems
- Ultrasonic thickness test evaluation of ESP and fabric filter casing and internal components
- On-site technical advisory services during ESP rebuilds, repairs, conversions, and equipment modifications. MET Buell APC's experienced technical advisors can provide additional quality control inspections of material, electrode clearances, and assist during air-load energization and start-up
- Training: MET Buell APC can custom design a precipitator or fabric filter operation and maintenance training seminar at your plant site

Engineering Services

- MET Buell APC's engineers and designers can evaluate options for rebuild, upgrade, or conversion of your ESP
- MET Buell APC can perform a structural evaluation of your Buell/GEESI ESP and provide recommended modifications, if required, to operate at a higher pressure due to SCR addition
